Victor the Vacuum needs to clean all the carpets in the house. Help him calculate the area of the floors. First, find the area of each room. Then add them together to find the total area. Don’t forget to answer the question below. **Remember:** Area = length \times width.

**Example:** Area of \( D \) = 8 \times 15 = 120 square feet

Total area = __________

Victor earns $2 per square foot of carpet vacuumed. How much will he earn for cleaning this house?
